Industrial Arts

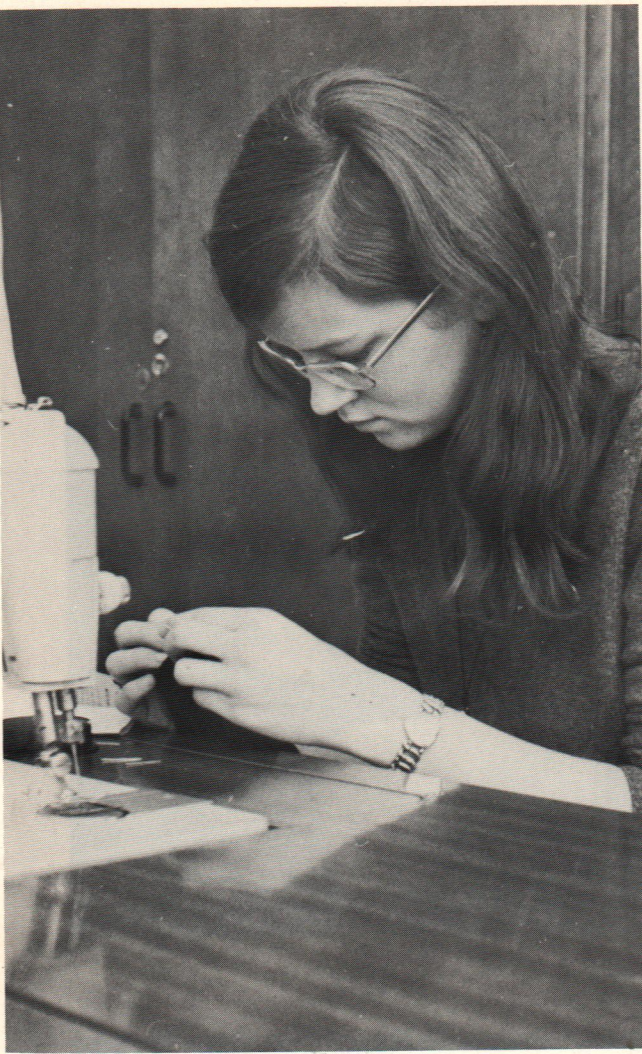

Mr. S. Marshall B. Sc.

Industrial Arts in our school is an area of great interest to boys of all ages and although the time that can be devoted to each student is limited, many worthwhile learning experiences can be enjoyed by the student. Industrial Arts class are scheduled for all boys in grades 6, 7, 8, and 9 and on an optional basis for grades 10 and 11. During these years in school, studies, projects, and experiments are arranged in the areas of drafting, woodwork, metalwork, electricity, plastics, and mechanics. Problem solving, individual responsibility, safe work habits, and care of tools and equipment are stressed as important educational goals to be achieved. No attempt is made to prepare any pupils for any particular trades, but rather, the development in the student of an awareness of the work that is associated with various occupations and broad understanding of the industrial and technological nature of our society. At this stage in the educational program of the students it is believed that an understanding of many facts of industry is preferable to highly developed skills in a limited area. Industrial Arts, being closely related to the practical aspect of living, can be of immense benefit to young people as they prepare for the future.
